Sewa

Volunteer requests for a community with an admin dashboard on every phone.

Installs like an app Email login Alerts in the app and on WhatsApp

THE IDEA

Departments need hands. Volunteers need clear details.

Admins post the work

Heads of departments such as Kitchen, Nursery and Pottery post what is needed, with the date, time, duration and how many brothers or sisters.

Volunteers choose

Volunteers see every open request, join the hours they can give, and get an alert when something is posted in a department they follow.

Everyone sees what is covered

Admins close a request when it is full and reopen it later. Numbers show how much time was requested and how many people joined.

HOW IT WORKS

From a posted request to a covered shift

1

Post

An admin posts the work, date, time, duration and how many brothers or sisters.

2

Alert

Followers of that department get an alert in the app, and on WhatsApp if they added a number.

3

Join

A volunteer joins the whole shift or only the hours they can give.

4

Cover

When every hour is taken the admin deactivates the request, and can activate it again later.

5

Review

Numbers show hours requested, people joined and the busiest days.

VOLUNTEER APP

What a volunteer sees

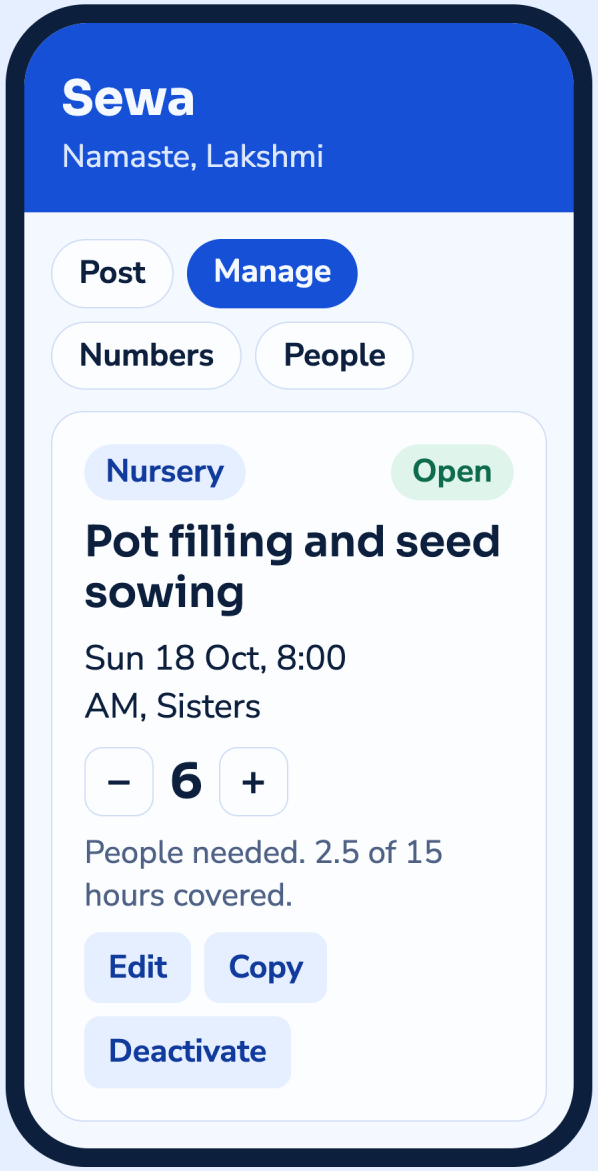

- ✓ Every open request with the work, date, time, duration, and Brothers or Sisters needed
- ✓ The place name with latitude and longitude, and a link that opens the map
- ✓ Join the whole shift or only some hours, change the hours, or cancel the slot
- ✓ Alerts for the departments they follow

The screen shows sample data.

ADMIN ON A PHONE

Managing requests from a phone

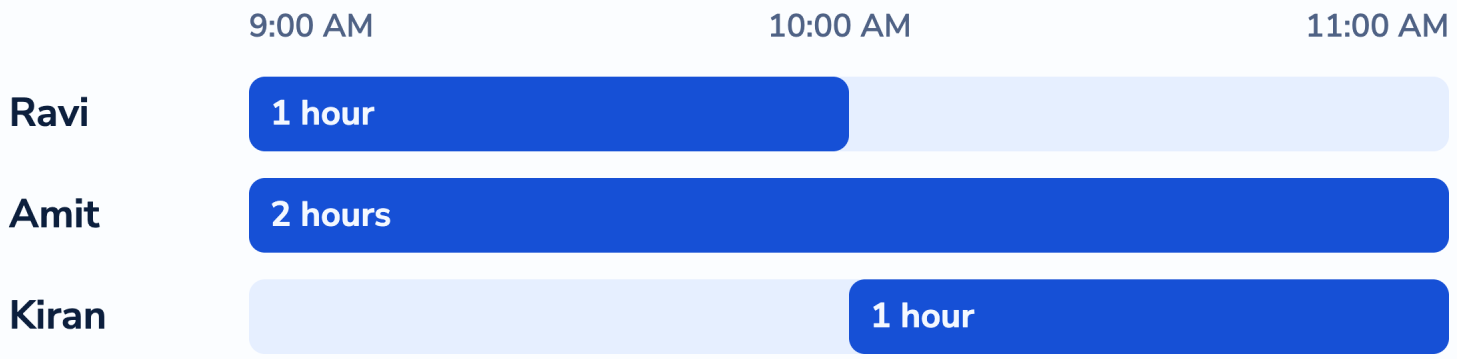

- ✓ Post a request in one short form. The location fills in from the department, or from the phone's position
- ✓ Raise or lower the people needed with – and +
- ✓ Edit any detail, or copy a request to another day and change only the date, time or number
- ✓ Deactivate a full request, and activate it again when more help is needed

The screen shows sample data.

PARTIAL HOURS

A request is full when every hour is covered

Needed

2 people × 2 hours = 4 person-hours

Covered

1 + 2 + 1 = 4 hours

Full

If Ravi cancels, one hour opens up again.

DASHBOARD

Numbers that help plan the week

Time requested

Person-hours asked for, by department and by day

People joined

Sign-ups compared with people needed

Hours covered

The share of requested hours that volunteers have taken

Busiest days

The days that ask for the most hours

Chart uses the sample data in the prototype, not real requests.

WHO CAN DO WHAT

Three roles, one app

Role	What they can do
Top admin	Adds departments and their in-charge, manages every request, and makes anyone an admin
Department admin	Posts and manages requests for their own department, and makes helpers admins of that department
Volunteer	Sees requests for their group, joins full or partial hours, cancels, and follows departments

Everyone signs in with an email and a one-time code. A WhatsApp number is optional and used only for alerts.

ALERTS

Alerts in the app, and on WhatsApp if wanted

In the app, for everyone

- Follow the departments you care about
- New requests and “more hands needed” appear in your Alerts tab
- Nothing extra to set up

On WhatsApp, optional

- Add a WhatsApp number in your profile
- Testing uses Meta’s free test number, which can message up to 5 verified people
- Your own WhatsApp is not automated, because that breaks WhatsApp’s rules

A wider rollout needs approved message templates and per-message fees. Check Meta’s current pricing first.

BEHIND THE SCENES

Runs on free plans for a small test

Later scale it up

Piece	Tool	Limit to know
Code	GitHub, private repository	A push updates the live site
Server	Render, Python	Sleeps after 15 minutes idle, about 1 minute to wake
Database	Supabase Postgres	500 MB, and pauses after a week without use
Login email	Brevo	300 emails a day, once Brevo approves the account
WhatsApp	Meta Cloud API test number	Up to 5 verified recipients

Sources: Render, Supabase, Brevo and Meta documentation, October 2026. Limits change, so check them before relying on them.

From a five-person test to everyone

Initial

Test with up to 5 people

- Email login, join, cancel and partial hours
- In-app alerts, and WhatsApp for verified testers

Next

Pilot with one department

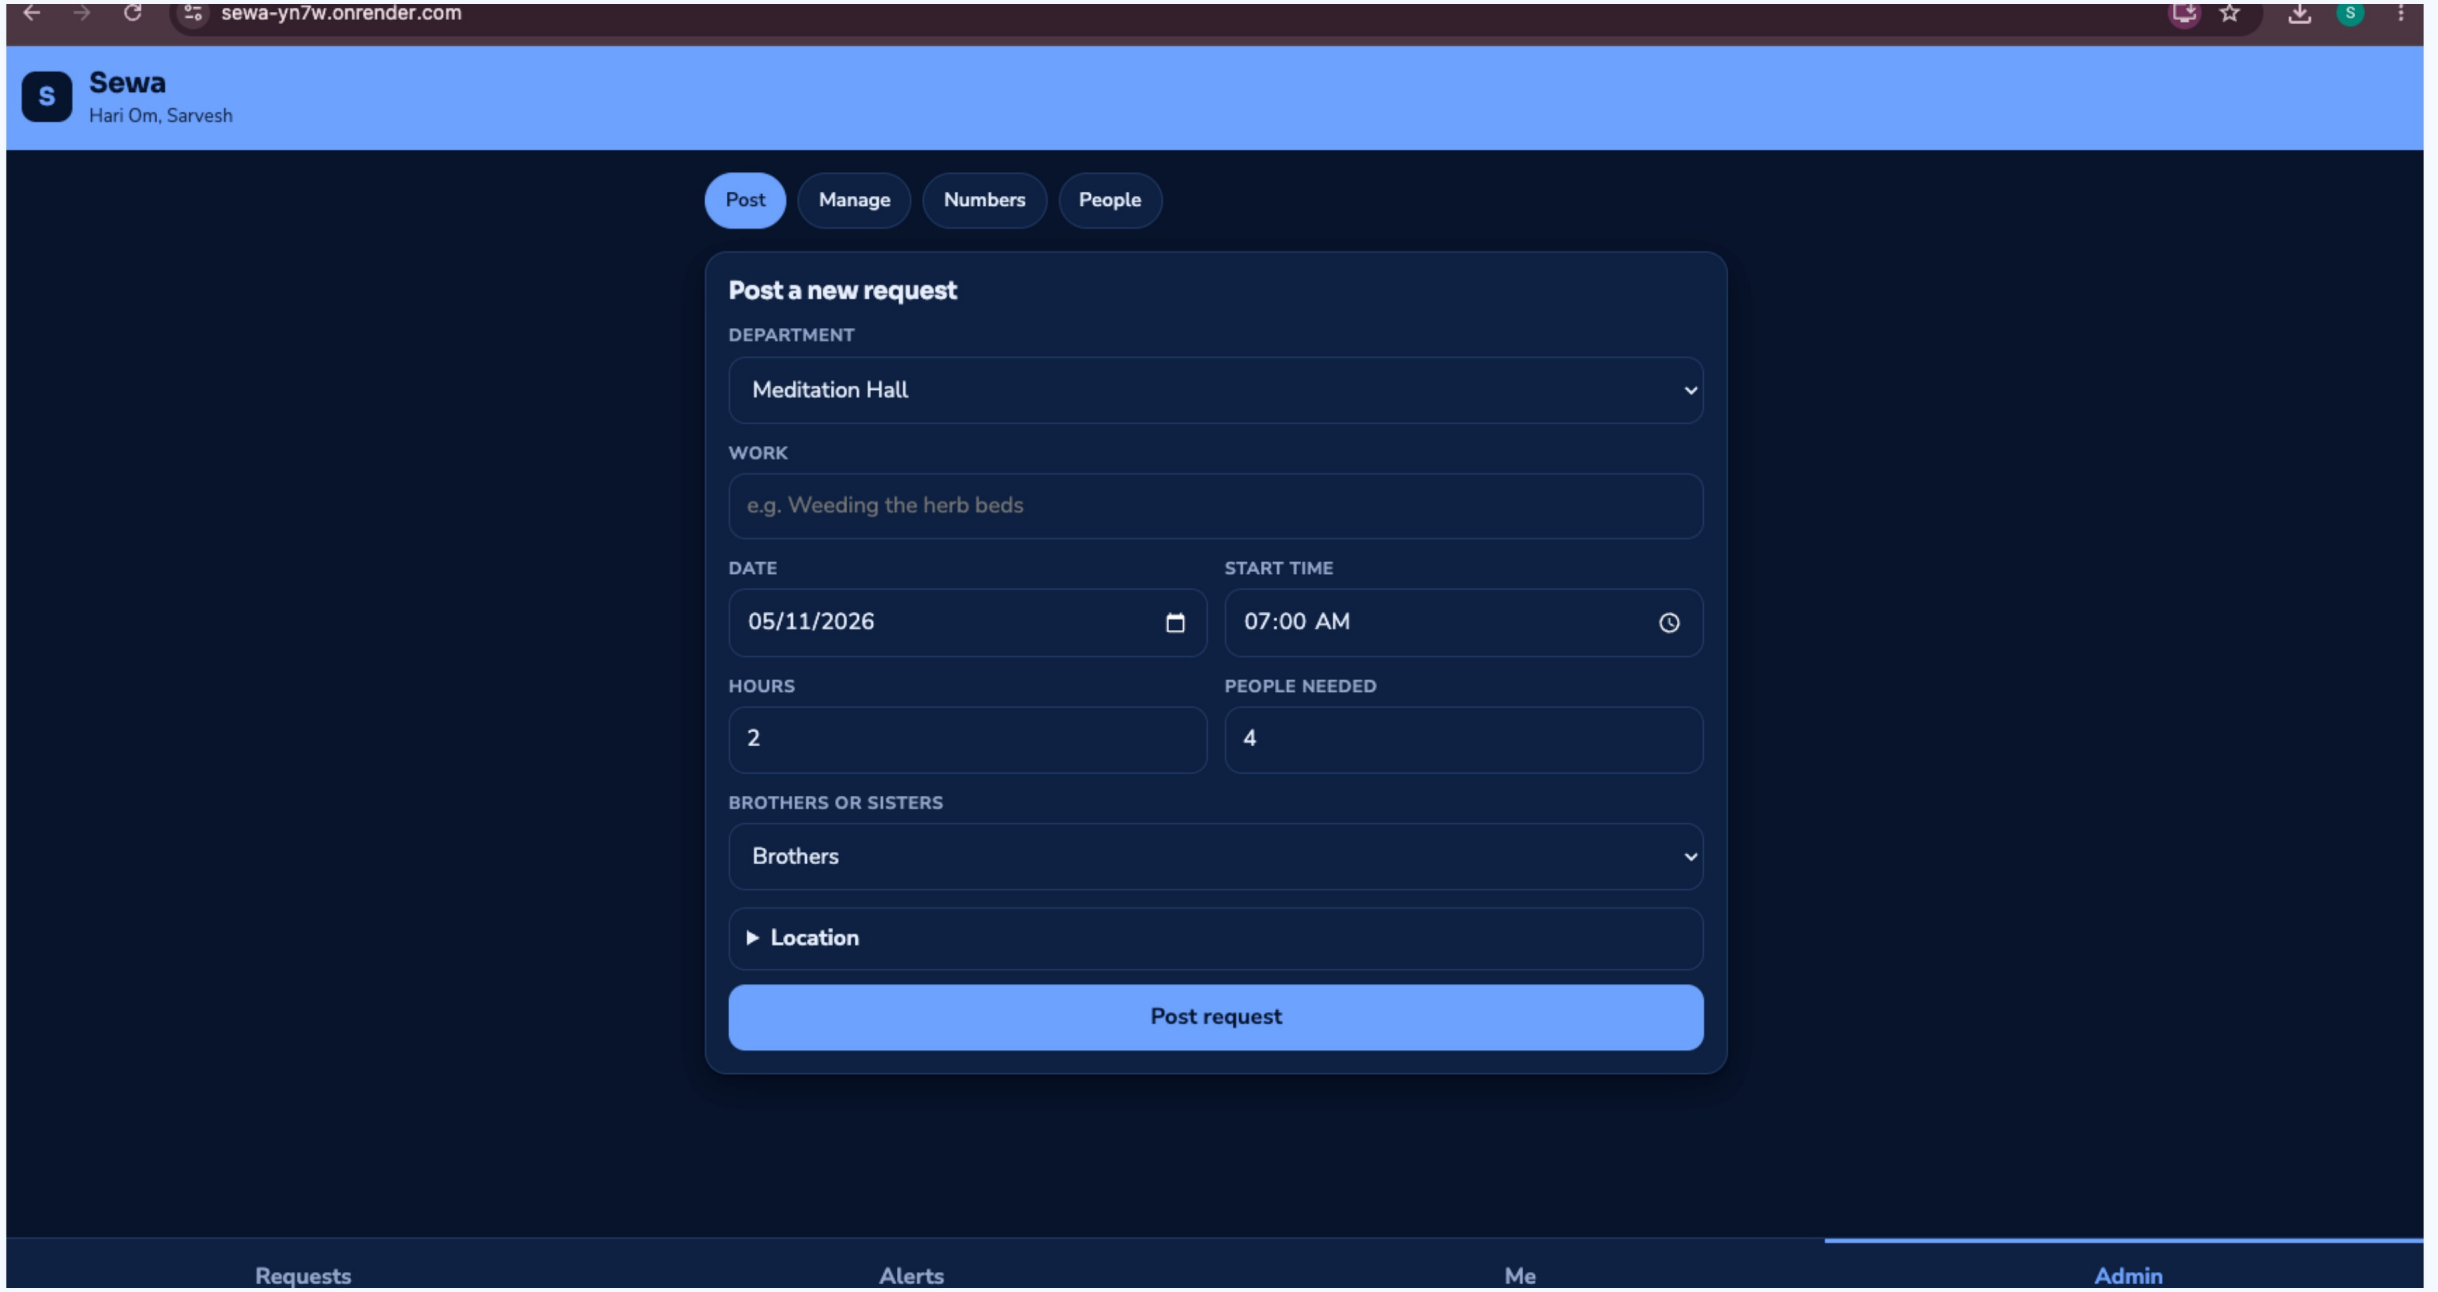

- Real departments and locations
- Database migrations before the data matters
- Always-on hosting if the first-load wait is a problem

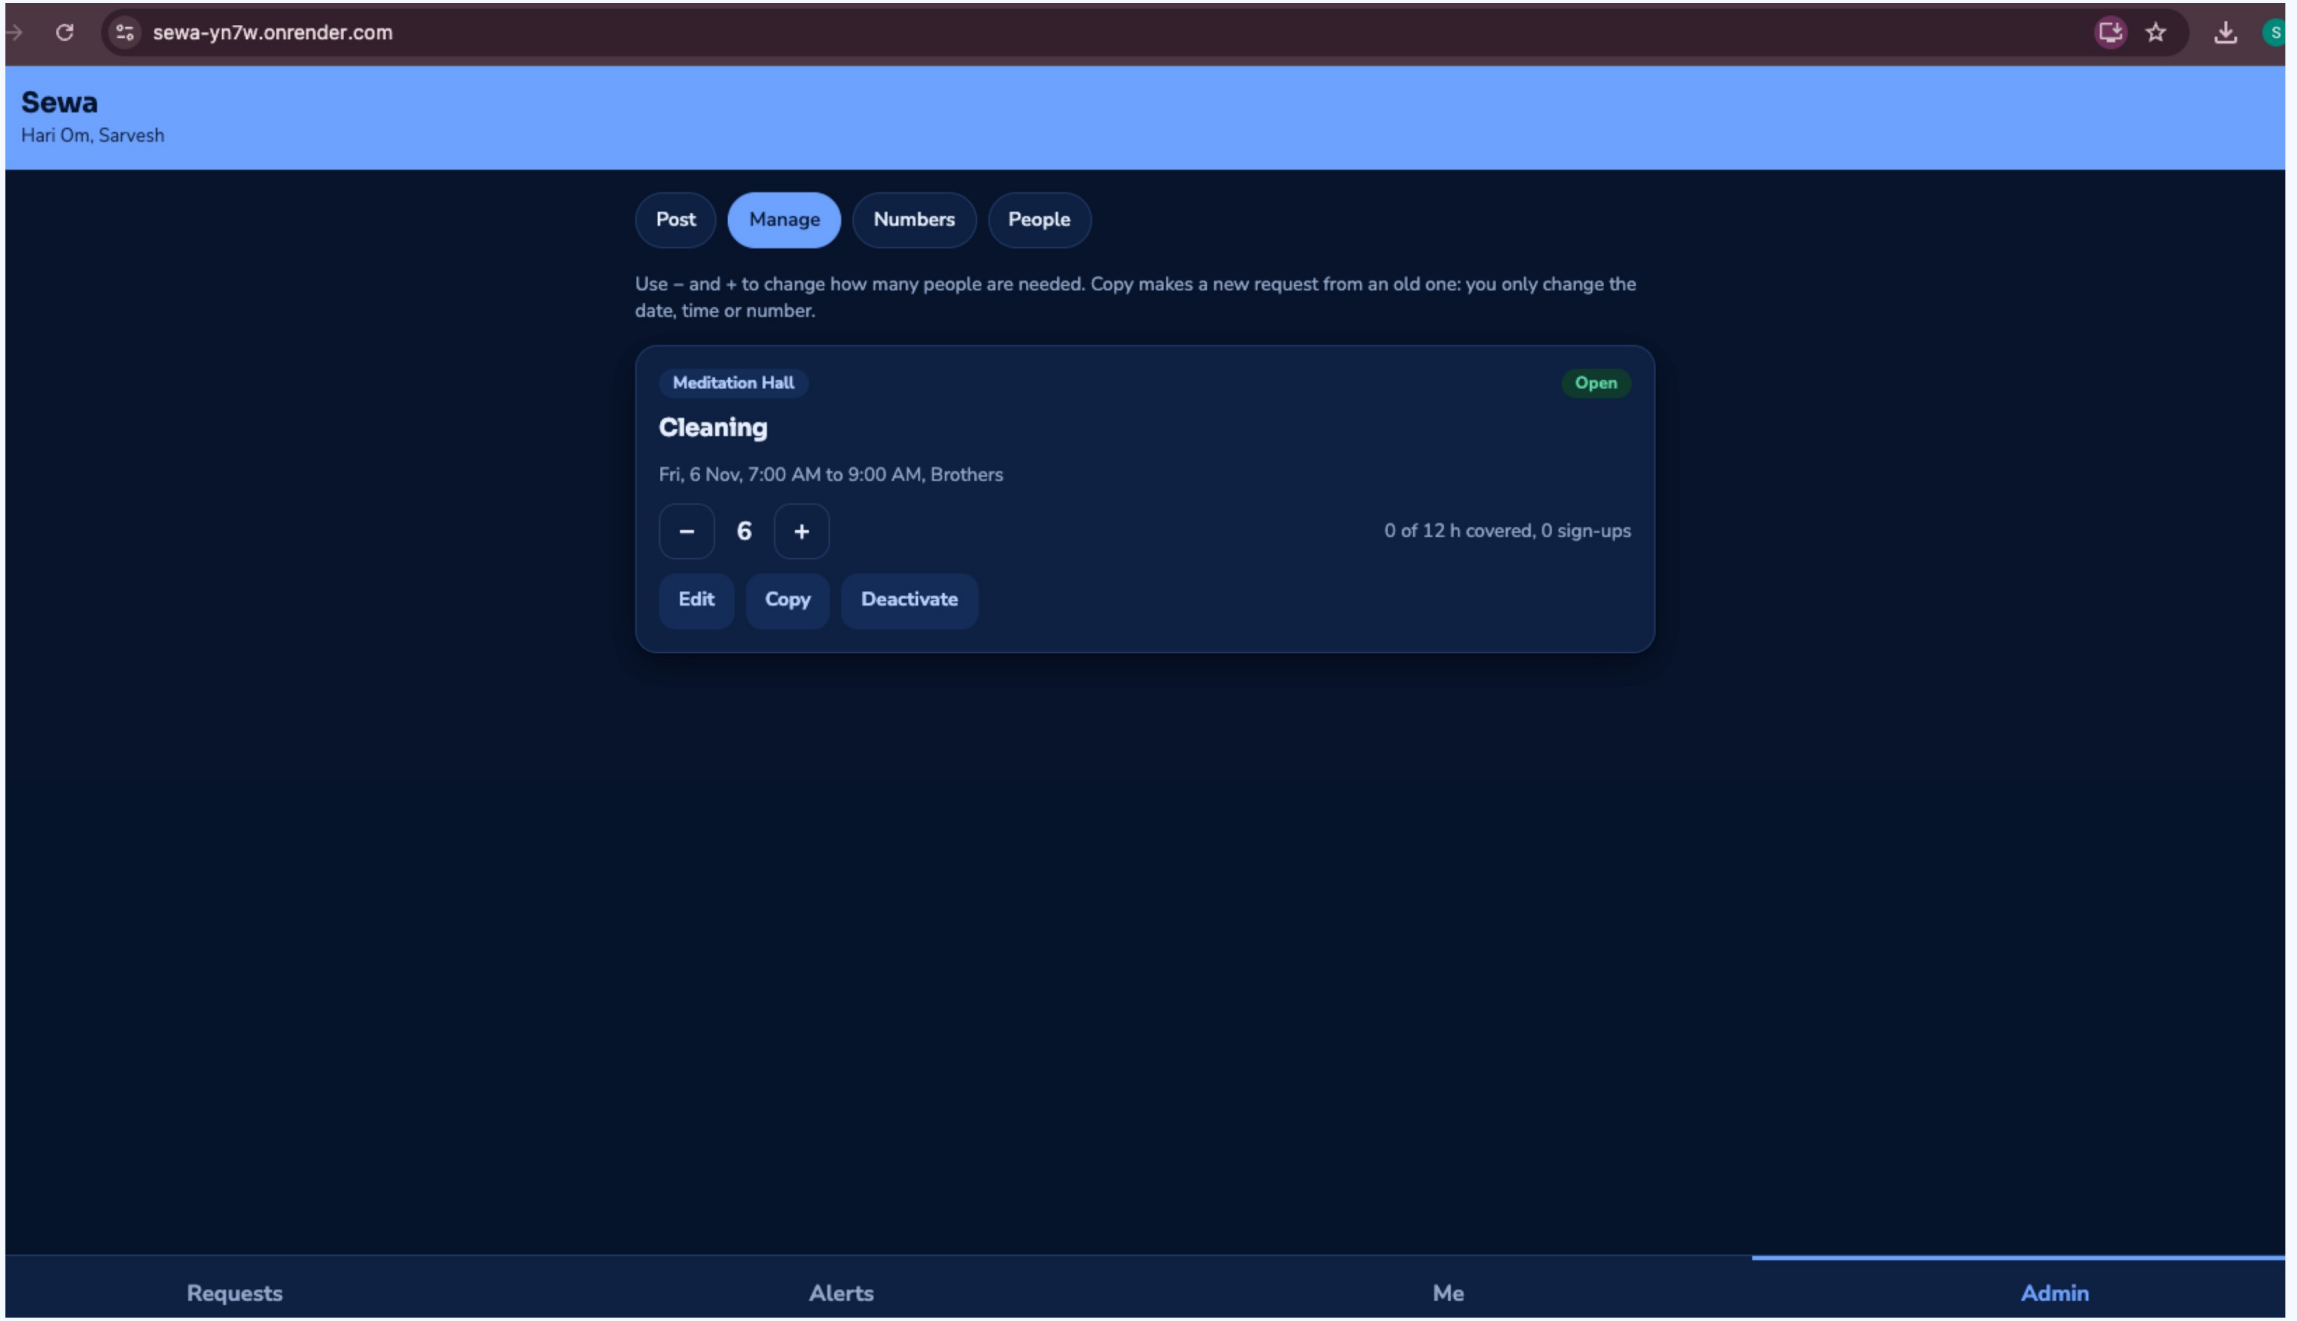

Later

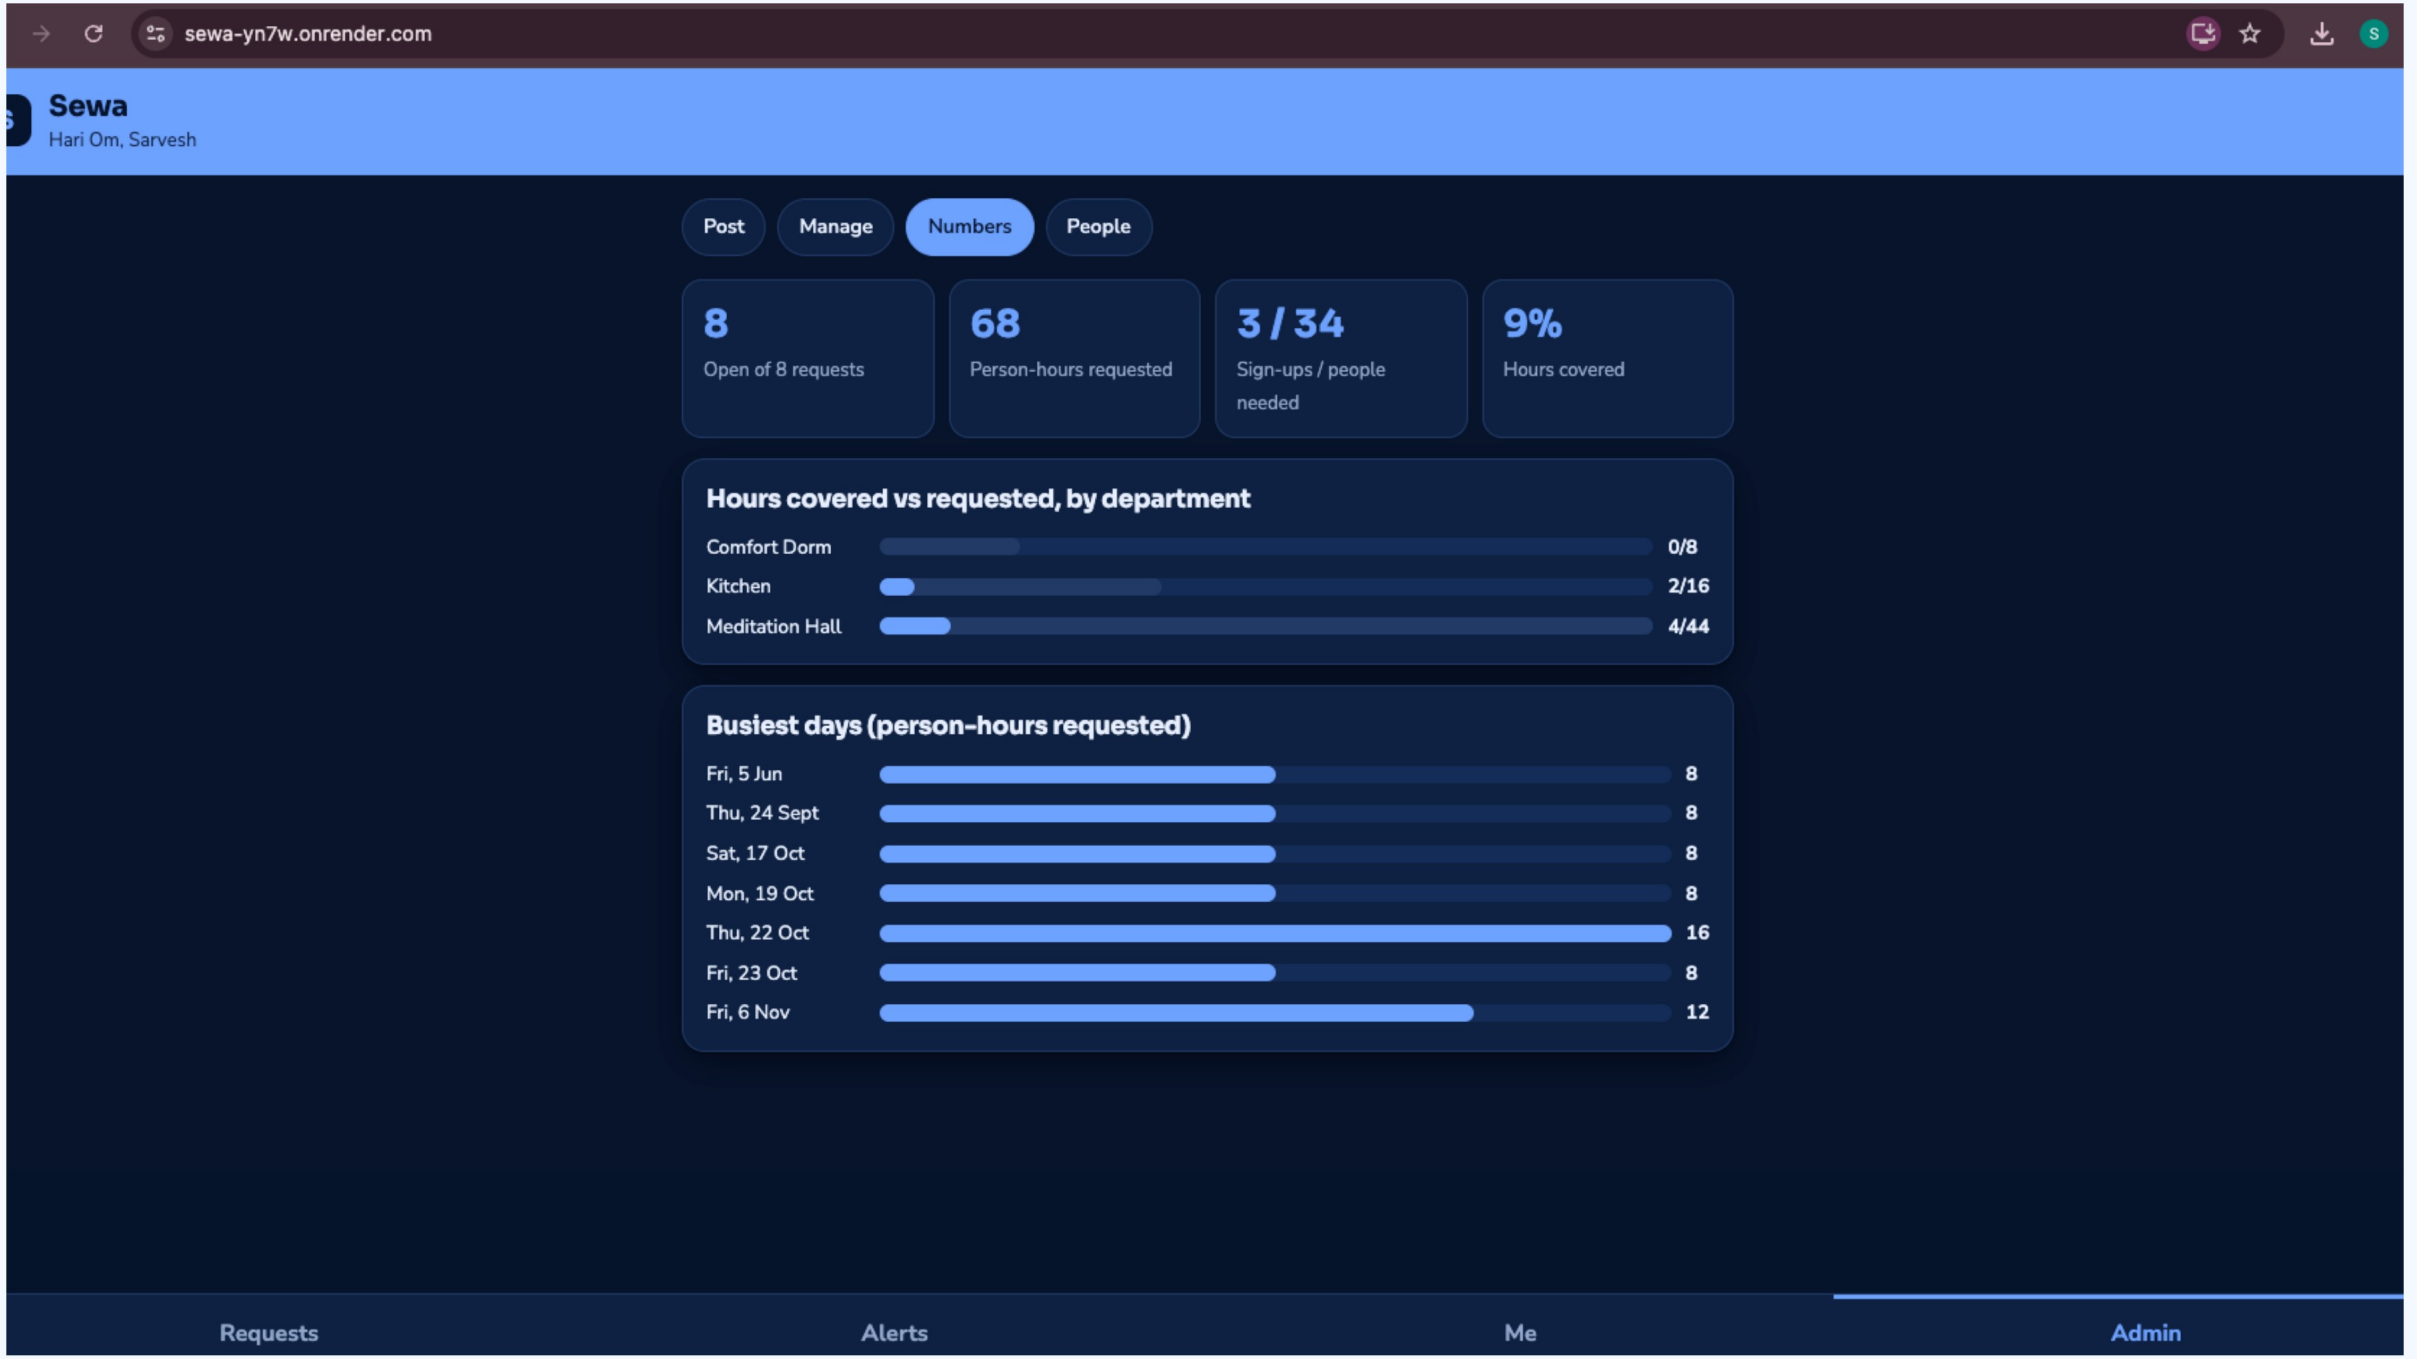

Scale up

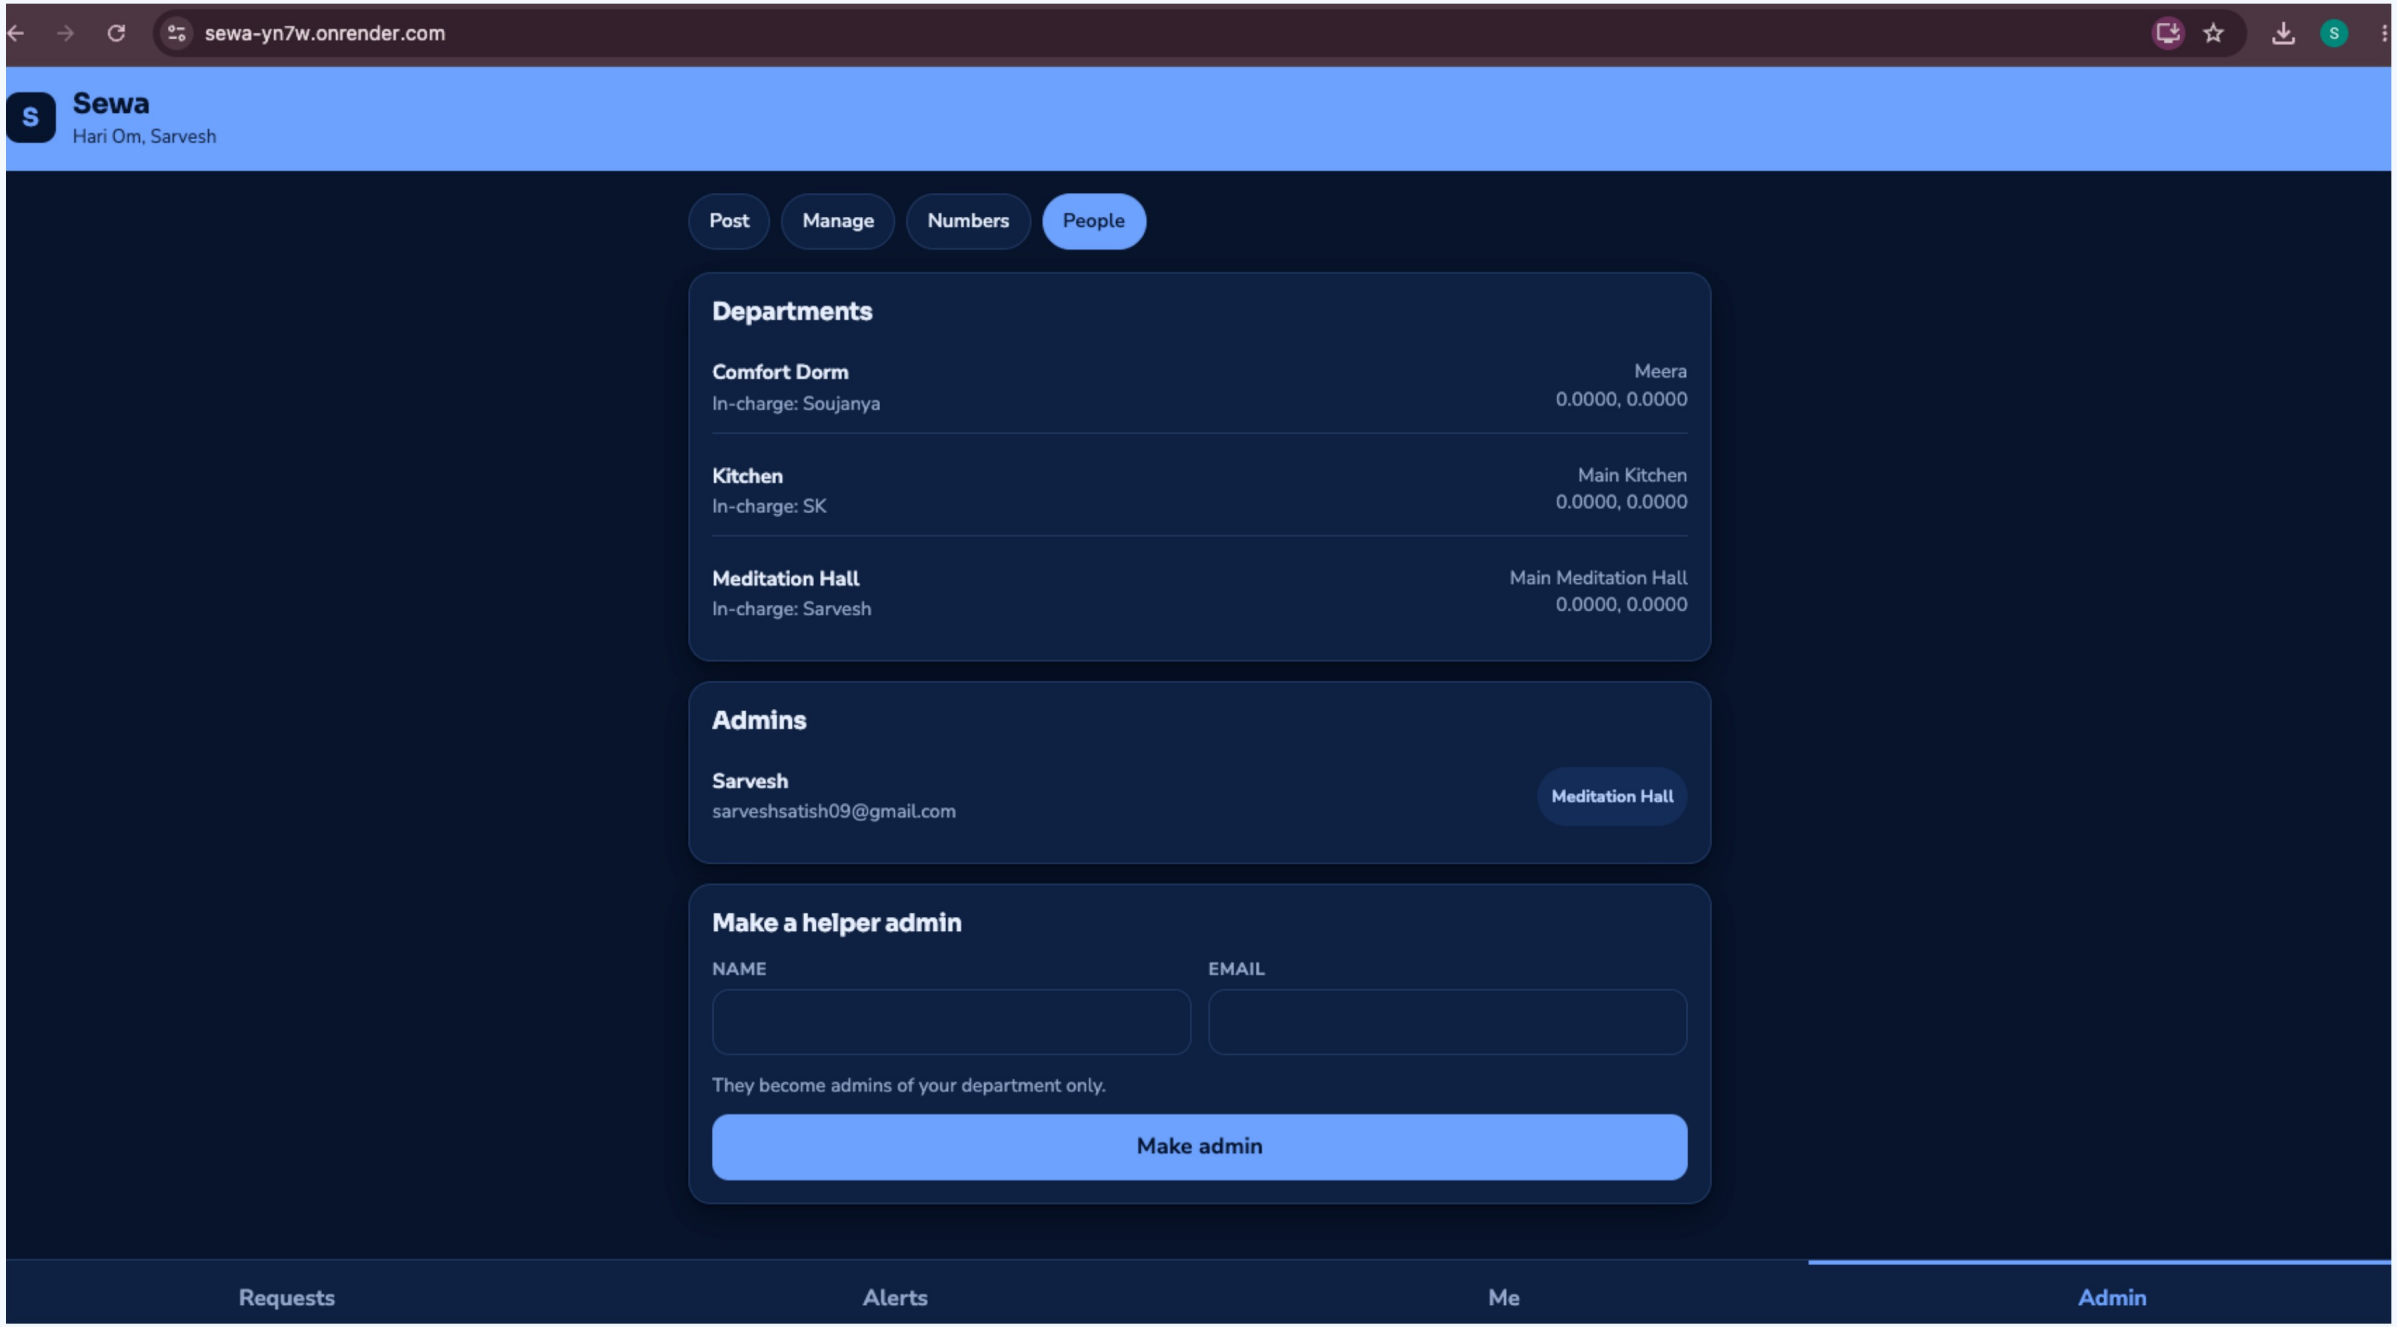

- Android app on the Play Store, after a 14-day closed test with 12 testers
- Paid hosting and database as use grows
- Push notifications and approved WhatsApp templates

GUIDELINES FOR USE FOR A COMMUNITY

A pilot with one department

- ✓ Choose the department, for example Nursery
- ✓ Add its in-charge, place name, latitude and longitude
- ✓ Invite up to five volunteers to use it for two weeks
- ✓ Review the numbers together and decide what to build next
